

SOYBEAN FIELD AND GRAIN TRAIN
STRAWN, ILLINOIS JUNE, 1987

Dear Ivor,

Delighted to find your two tapes - Audible

Communication lecture & Elastic tuning organ - and

letters of Sept 13th, 21st, and Tuesday Sept 26th
upon my return from the Univ. of Illinois
Sat. night (Sept. 30th). I'm carefully listening
to your elastic tuning recordings & will respond
more fully when I've absorbed them fully.

I brought back the "upgraded" platypus -
I believe this one will really work - after 3 years.
The inventor - Lippold Haken - also has a program
to analyze instrument notes quickly (enormous
amounts of computation are needed!) and resynthesize
them using additive synthesis. He uses linear interpolation
to incorporate timbral shifts with pitch, note loudness,
and other parameters. Ivor, this

is a major advance I will write more soon. Take care. Yours, Anne
